

County Contractors recognises that its activities have an impact on the environment and is committed to improve its environmental performance and minimise the harmful effects through caring policies and effective management.

County Contractors accepts and acknowledges its obligations and responsibilities under legislation and guidance dealing with environmental issues that effect or arise in consequence of its business.

We will determine the environmental issues requiring attention and implementation of the measures to achieve improvement. In particular attention will be given to the ISO 14001:2004 Environmental Management Standard and its continued development.

- The formation of Environmental awareness amongst those working for or on behalf of the company, providing training as necessary and encouraging sub-contractors and suppliers to adopt sound environmental practices;
- The considerate storage, treatment and disposal of any waste, hazardous or potentially toxic materials to avoid environmental harm;
- The use and re-use of materials to minimise and curtail creating waste and, whenever practicable, using materials and products from sustainable sources;
- The control the emission of pollutants, noise and dust, and the use of potentially harmful substances and treatments during construction activities;
- The conservation of energy through sensible selection, use and management of resources, equipment, plant and transport;
- The continued development, monitoring and investigation of systems, practices and procedures at each stage of construction to ensure the environment remains a foremost consideration.

In-line with the ISO 14001:2004 management system the following policies have been developed to ensure compliance and

- Sustainable Procurement Policy
- Paper Usage Policy
- Energy Usage Policy
- Transport and Travel Policy
